

Wood products
**help fight
climate change.**

#ItTakesAForest

Trees take carbon out of the air, in the form of carbon dioxide, and use it to grow. More than 50% of a tree is made up of carbon.

When trees are turned into wood products like cottages, docks, and your favourite chair, they lock up this carbon for a long time — beyond the life of the tree.

To learn more about how wood products help fight climate change, visit ittakesaforest.ca.

#ItTakesAForest is a collaborative led by Forests Ontario and local, like-minded individuals and organizations. It delivers fact-based information to the public about the role of forests and forest products in our growing economy, addressing climate change, and creating a healthier ecosystem.
